**CONTRACT: INF/CEE09/2024 –THE SUPPLY AND DELIVERY OF HIGH MAST LIGHT STEEL STRUCTURES COMPLETE WITH LUMINAIRES**

### TECHNICAL SPECIFICATIONS

#### 1. SCOPE

This contract covers the supply and delivery of the masts and associated light fittings as an integral assembly. The light fittings must be pre-fitted prior to delivery and then removed for safe transport. The carriage shall therefore be pre-drilled or clearly and indelibly marked and numbered to show the position of the luminaires for the benefit of the erection personnel. The masts must be designed in accordance with SANS 10225 1991-1.

#### 2. COVERAGE

##### For 30 metre Mast

The area of coverage shall be a minimum of a 300m diameter, to a lighting level of one [1] lux minimum, measured horizontally. This must be achieved by utilizing **9 x 265 Watt LED Flood Light Luminaires** with downward facing daylight switch.

##### For 20 metre Mast

The masts must be designed to carry the specific quantity of luminaires in accordance with SANS 10225 1991-1. The luminaire carriage of the mast shall have the floodlight mounted on it and must be adequately counterbalanced. **6 x 65 Watt Solar LED Flood Light Luminaires** complete with Batteries, Battery Boxes and Solar Panels.

##### For 15 metre Midhinge (Scissor) Mast

The masts must be designed in accordance with SANS 10225 1991-1. The moving part of the mast shall have the floodlight cross-arm mounted on it and must be adequately counterbalanced. **4 x 265 Watt LED Flood Light Luminaire** with downward facing daylight switch on horizontal illuminant on ground level to be 1 lux.

### 3. 30m High Mast Specifications

The hot dip galvanized mast must be manufactured from Grade 300WA steel **with a minimum wall thickness of 4mm at any point in the mast structure.**

#### 3.1 Construction

The 30m masts shall be designed to withstand a maximum wind gust velocity of 43m/second, with all light fittings installed on the carriage.

The mast shall be designed with a minimum factor of safety of 2.5. In the 30m masts the design shall be such that wind excited oscillation shall be damped as much as possible.

#### 3.2 Raising and Lowering Gear

For installation and maintenance purposes, it shall be possible to raise and lower the floodlight carriage by means of a winch mounted in the base of the mast. It is essential that the wire ropes are in tension at all times.

The mast must be equipped with a **three-point hoisting mechanism**, consisting of three (3) 6mm diameter stainless Steel wire ropes, running over three pairs of Aluminium pulleys on head frame of the mast. **2 rope systems will not be considered.**

The luminaire carriage shall be drawn against three (3) inverted cones to ensure level positioning of the fittings in the operating position. The hoisting ropes, which will remain under tension at all times shall terminate inside the mast on a clevis plate to which the rope of the hoisting unit can be connected. All fasteners connected with the raising and lowering device shall be secured by Nylok type nuts or stainless steel split pins.

#### 3.3 Steel Wire Ropes

The floodlight mounting ring shall be raised or lowered by means of a **three point hoisting mechanism** consisting of three (3) stainless steel cables with a minimum breaking strain of 2000 kg each. The factor of safety for the hoisting cables shall be a minimum of 20.

#### 3.4 Head Frame and Pulleys

The head frame shall consist of a chassis integral with a sleeve which fits over the mast top and shall be secured axially and in azimuth. Guides and stops shall be provided for docking the floodlight mounting ring.

The complete head frame and carriage shall be hot-dipped galvanized. The head frame pulleys shall be Aluminium and run on self-lubricating bearings.

The sheave groove diameters shall not be less than the particular rope nominal diameter plus 5% and all pulleys shall be provided with close-fitting guides to prevent ropes and cable from leaving the pulley grooves.

Arrangements shall be provided to ensure that the electric cable and steel wire ropes are separated before passing over their respective pulleys.

### **3.5. Hoisting Unit (30 metre Masts)**

Winches shall be completely self-sustaining without the need for brakes or clutches.

The gear ratio shall be a minimum of 30:1. Lubrication points for the winches shall be easily accessible. The winches shall be mounted with straps which are welded to the mast interior.

A test certificate, stating the safe working load of the winch and issued by a recognized testing authority shall be supplied with the winch.

Termination of the winch ropes shall not involve distortion or twisting of the rope and a minimum of four turns of rope shall remain on the drum when the floodlight mounting ring is fully lowered.

Items must comply with **SANS 2 – 5 (High mast lighting)**.

### **3.6 Hydraulic Power Tool**

The Hydraulic drive must be extremely robust and have low maintenance needs, even over long periods and frequency of usage.

The TORQUE LIMITING capability must be extremely reliable in combatting over-tensioning of the winch ropes which in most cases susceptible to wear and wedging over pulleys etc. with consequent strand breakages.

#### **COMPONENTS**

230V Single phase electric motor for 1.5KW Rating & 4 Pole speed.

Hydraulic Pump of 200 BAR Capacity

Directional valve with built-in torque limiting cartridge

Suction & return-line micronic filtration

High torque slow speed hydraulic motor

15 litres Rectangular oil reservoir (340 X 280 X 750 height)

Special mounting bracket to attach to winch

High pressure hydraulic hoses

Motor / pump housing and drive coupling

## DRIVE REQUIREMENTS

The units must be able to drive single drum winches of 600 nm output torque and which normally require 30Nm input drive torque at a speed not exceeding 300 RPM.

The torque limiting cartridge must be factory set at 30Nm as tested on a continuously running hoisting rig to afford an output torque capable of raising a load not exceeding 500kg. Any excess

Torque demanded by the winch will not be possible as the hydraulic motor will maintain its maximum permissible torque for long periods even in a stalled condition. In such a case there is no possibility that the winch can slip in reverse as the directional valve will resist this even statically as long as the motor remains attached in its working position.

Therefore, it is imperative that the forward/reverse lever of the directional valve be able to spring to a neutral LOAD-HOLDING position automatically if the operator lets go (dead-man's-handle). Please note that with the hydraulic drive-motor unattached to winch, the winch alone, is able to sustain the load of itself.

### 4. 20m "Hi Lite" Mast Specifications

#### 4.1 Construction

The masts shall be constructed from conical sections which, when assembled, will form a tapered Column circular cross section.

The mast shall be of lightweight construction and a base plate shall be welded to the bottom end of the lowest section suitably drilled for foundation bolts. All welding shall comply with SANS 10225 1991-1 specifications carried out by coded welders, tested according to the AWS specifications

The steel used in the manufacture of the mast shall have an ultimate tensile strength of between 460Mpa and 680Mpa and is identical to SABS 1431 grade 355WA steel. Proof must be supplied that the manufacture is ISO 9001: 2008 accredited.

#### 4.2 Working Loads

The mast must be designed to carry **6 x 65-Watt LED luminaires, batteries, battery boxes and solar panels** on top in strict accordance with SANS 10225 1991-1 Code of practice for the design and construction of lighting masts. The following site factors to be considered:

Design wind speed: 40m/s

Altitude of site: 1000 metres

#### 4.3 Raising and Lowering Device

# CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging). Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
  - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
  - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

**Includes price quotations, advertised competitive bids, limited bids and proposals.**

**Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.**
